

Straight Boom Lift Part

Straight Boom Lift Part - Boom lifts are likewise referred to as aerial work platforms. They can include a platform or bucket that is connected to the end of a hydraulic lifting system. This type of aerial work platform is usually found mounted on a flat back pickup van, likewise called a "Self Drive." Boom lifts are also presented on a stand-alone trailer or a self-moving platform. They are usually mounted on the back of a truck and in this case, normally referred to as a "bucket truck."

Boom lifts have an attached [forklift parts](#) bucket which is meant for an individual to stand in and work from. There is usually a duplicate set of controls which are utilized so as to manipulate the position of the bucket. The driver in the bucket can position themselves. Some boom lifts include telescoping hoisting arms that allow much flexibility as far as the reaching capacity is concerned. Typically, there are automatic safety controls to be able to prevent the machine from tipping over. When operating in tricky areas, articulated boom lifts are a lot more available as opposed to stick booms, particularly when the application needs clearing surrounding obstacles.

Boom lifts are very popular in the agricultural sector where they were initially meant for use in orchards. This piece of equipment enables the worker or fruit picker to find and pick fruits which are high in the trees. Similar machinery is used by cable and telephone companies as well as electrical providers who do installation and maintenance on utility poles. Boom lifts can even come in handy for hanging Christmas light displays and banners.

rather than using the traditional ladder, various modern fire trucks use a boom lift instead. This kind of boom lift is referred to as a snorkel and there are window cleaners who use them as well. Boom lifts are utilized in various trades. They are often relied on for exterior painting, as well as by arborists who need to work safely within high trees. Boom lifts are often found in the construction industry.

There are segments of the entertainment industry who use boom lifts. An example is Michael Jackson, who normally started live performances of his hit song "Beat It" while being on a moving boom lift. There were instances he daringly hung off of the equipment while holding onto the bars with his feet and hands for added effect. Movie sets make use of boom lifts often for hanging lights and props and helping with set decorating too.
