

Used Parts for Forklifts

Used Forklift Parts - Inevitably, lift truck parts would eventually wear out and need replacing. The option of obtaining new components can become costly so another idea is to obtain used components. This could save much money in the long run. It is a good idea to purchase used forklift parts that have been remanufactured. These components will guarantee that you are getting components which will work for a long time and be productive.

Remanufacturing broken and worn out parts is a more cost effective method overall compared to rebuilding. With rebuilding parts, just the parts that are broken or worn out get changed, which means that other wearable components can break down soon after purchase.

Remanufactured components are cleaned after being taken apart and have the unusable parts replaced. This technique can provide the best assurance for second-hand components. All wearable parts are replaced regardless of age or wear which is one more reason why remanufactured parts on the whole function so much better. Whatever part within the part is new and this offers far longer life to the second-hand part. Depending on the lift truck components which are being redone, the cleaning process and the complete remanufacturing process will differ.

The engines are cleaned after a complete disassembly. Different engine components such as spark plugs, pistons, rings, filters, valves, and valve springs can be replaced during the process of remanufacturing. The engines are hot tested after reassembly to guarantee that there are no noise, no oil pressure problems, no leaks or any vacuum.

Transmissions are one more item that is oven cleaned after being disassembled. The transmission is then pressure washed. A complete inspection is done so as to check for any cracks. Bearings, bushings and seals are all replaced. Normally, the replacement components utilized on transmission components meet OEM specifications.

A few lift truck components like for instance the water pump, torque converters, the alternator, the starter and steer axles could be quite serviceable after worn parts are replaced. The electronic control in the electric forklift is maintained by the control card. This card can likewise be reproduced with replacing all aged and worn out parts. Unlike other lift truck parts the control card could only have the worn and aged parts replaced.

Remanufactured components are thoroughly examined upon reassembly to guarantee they are in top condition prior to being sold. It is essential when purchasing remanufactured parts to be sure they have undergone the proper testing and inspection procedures. On certain bigger components like transmissions, steer axles and engines, OEM specification replacement components must be utilized.

The lift truck dealer could ensure that the parts they have reproduced meet the OEM specifications. This would also guarantee the parts meet industry standards. A lot of details go into remanufacturing used parts. This attention to detail provides more serviceability out of remanufactured components opposed to the components that were simply rebuilt.
