

Hyster Forklift Part

Hyster Forklift Parts - Hyster is recognized as a international leader in forklift trucks. However, it started as a producer of lifting machines and winches. Most of its production was focused in the Pacific Northwest and dealt primarily with the wood and logging industry. A couple years after the first forklift trucks were invented Hyster became synonymous with quality production. Over the last 80 years Hyster has continued to get bigger and grow its product line. The expansion of its products coupled with its wish to stay service oriented has allowed Hyster to mature into the intercontinental participant it is today.

Hyster experienced major improvements through the 1940's and 1960's. In 1946, Hyster opened a plant in Illinois that was entirely committed to mass manufacturing trucks. This allowed Hyster to force its expenses down and, at the same time, offer a better quality product at industry aggressive prices. In 1952, Hyster began its first foray in to the international production market through opening its first plant in the Netherlands. The Netherlands plant was originally designed to produce two products: Hyster 40" and the Karry Kranes.

The forever changing needs of Hyster clientele and Hyster's capability to continue to innovate led to rapid growth throughout the 1950's and sixties. They began constructing container handlers in the United states in 1959 to meet with the ever expanding demand for transportation goods. In 1966, Hyster developed a process for allowing a lift truck to go both forward and backwards using the same pedal. This pedal was called the Monotrol pedal, which revolutionized the industry. Later in the decade Hyster opened a research and development centre in Oregon that was concentrated on improving the design and functionality of lift trucks. The centre is still one of the world's top testing facilities in the materials handling industry.

The sixties was characterized by rapid growth right through the whole materials handling industry. Due to this, Hyster considered it necessary to refocus its strategy towards these developing mass markets. Thus, in 1970, the XL design philosophy was born. The XL design philosophy allowed Hyster to offer better quality at a more inexpensive price. A further expansion in manufacturing capabilities was necessitated by the need in Europe for Internal Combustion Engine Trucks. To plug this hole, a plant in Craigavon, Ireland was opened in 1980. Through the 1980's Hyster continued to concentrate on developing industry leading forklifts. The Hyster company name was recognized throughout the world for its dedication towards quality. This attention to quality brought several suitors for the company. In 1989, a large multinational company based in Ohio called NACCO Industries purchased Hyster and began an aggressive expansion strategy. NACCO quickly replaced the XL philosophy with a more driver oriented lift truck that focused on operator comfort, which is identified as the XM generation of lift trucks.

The shift in supply chain management to a much more just-in-time focused approach has meant that Hyster has had to constantly invest in new-found technologies. Acquisitions and investments were made in the US, Italy, Netherlands, and lots of other places all over the globe. All of these investments have made Hyster a international leader in the forklift market. Recently, Hyster celebrated its eightieth anniversary as an industry leader of materials handling equipment, which consists of more than 300 assorted versions of forklift trucks.
